ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

gbpatent@gbpatent.com
pto@gbpatent.com

Office Action Summary

Application No.

10/525,831

Applicant(s)

NAKATSURA ET AL.

Examiner

Anne L. Holleran

Art Unit

1643

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 October 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-26 is/are pending in the application.
- 4a) Of the above claim(s) 1-8, 11-20 and 25 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 1/06, 4/06.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group II (claims 9-10, 21-23, 24 and 26) and further elect species of SEQ ID NO: 14 in the reply filed on 10/19/2007 is acknowledged. The traversal is on the ground(s) that the examiner has not set forth any reason as to why the species are not so linked, and that the restriction should be withdrawn for this reason alone. This is not found persuasive because the restriction is between groups I, II, III, IV and V, and the reasons set forth are given in the previous Office action, in which it was set forth that a polypeptide comprising the amino acid sequence of SEQ ID NO: 1 is taught in the prior art by Old (WO 99/04265), and therefore the polypeptide of SEQ ID NO: 1 is not a special technical feature. Additionally, it was noted that the claims recited 20 additional peptide sequences (SEQ ID NO: 3 through SEQ ID NO: 22), and the examiner requested an election of species of one of them to begin the examination process. A restriction between species will be withdrawn if a generic claim is found to be allowable. The reason for the lack of unity between the species was stated in the previous Office action, because the Office action contained the statement that each of the peptide sequences SEQ ID NO: 3 through SEQ ID NO: 22 is an individual species of peptide. Applicants have not answered this assertion by stating on the record whether in fact these peptides share a common structural feature. Applicants also noted that a search of group I and group II would overlap and therefore search and examination of both groups would not impose a serious burden on the examiner. This is not found persuasive because group I is drawn to polypeptide claims and group II is drawn to polynucleotide claims. Examination of polypeptide

claims requires consideration of a different set of issues than does examination of polynucleotide claims, as each of these products may be used in different methods, requiring search of different fields of the non-patent literature. Furthermore, while a polynucleotide may be a novel product, the protein that it encodes may be already known in the art and not disclosed in the same databases as those that are searched in the examination of polynucleotides. Lastly, burden is not considered in the analysis of lack of unity under PCT Rule 13.1. Therefore, applicants' traverse of the restriction requirement is not persuasive.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 1-26 are pending. Claims 1-8, 11-20, and 25 are withdrawn from consideration. Claims 9, 10, 21-24 and 26 are examined on the merits.

Claim Objections

3. Claim 9 is objected to for depending from a withdrawn claim. Claim 9 should be rewritten to include all of the limitations recited in claim 1.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 10 is indefinite because the scope of the claim cannot be determined with respect to the section "b", which recites a DNA hybridizing with the DNA having the nucleotide sequence shown in SEQ ID NO: 2 under stringent conditions. The conditions that define "stringent conditions" are not set out in the specification, merely an example of such conditions (page 11, last paragraph). Therefore, it is not possible to discern which nucleic acids are included within the scope of the claim and which are not included.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claim 10 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The basis for this rejection is that a DNA hybridizing with the DNA having the nucleotide sequence shown in SEQ ID NO: 2 under stringent conditions and encoding a protein having immune-stimulating activity, or DNA having a partial sequence of the DNA of SEQ ID NO: 2 or of a sequence that hybridizes with SEQ ID NO: 2 and encoding a protein having immune-stimulating activity each encompass a genus of nucleic acids for which the disclosure of SEQ ID NO: 2 is not representative.

For a claim drawn to a genus, the written description requirement may be satisfied through sufficient description of a representative number of species by actual reduction to

practice or by disclosure of relevant, identifying characteristics, i.e. structure or other physical and/or chemical properties, by functional characteristics coupled with a known or disclosed correlation between function and structure, or by a combination of such identifying characteristics, sufficient to show the applicant was in possession of the claimed genus. A "representative number of species" means that the species, which are adequately described, are representative of the entire genus. Thus, when there is substantial variation within the genus, one must describe a sufficient variety of species to reflect the variation within the genus (see Official Gazette 1241 OG 174, January 30, 2001).

In the present case, the genus encompassed by a DNA hybridizing with a DNA having the nucleotide sequence shown in SEQ ID NO: 2 under stringent conditions, and encoding a protein having immune stimulating activity is a very different nucleotide sequence from SEQ ID NO: 2 itself and encodes a protein that is very different from the one encoded by SEQ ID NO: 2. Hybridization under stringent conditions does not limit the size of the nucleotides and because the reference nucleotide sequence is one that "comprises SEQ ID NO: 2" the hybridization could occur over regions that are outside of SEQ ID NO: 2 and therefore, have no sequence relationship with SEQ ID NO: 2 at all. The genus encompassed by a DNA having a partial sequence of DNA having the nucleotide sequence of SEQ ID NO: 2 is a varied genus and includes DNA molecules that encode any number of proteins, because almost any protein is one that has immune-stimulating activity. A partial sequence may be as small as 2 nucleotides in length. Therefore, a DNA having (interpret as "comprising") a partial sequence may be one that has only a sequence of 2 nucleotides in common with SEQ ID NO: 2. Therefore, it does not appear that the disclosure of SEQ ID NO: 2 itself is representative of the broad scope

encompassed either by a DNA hybridizing with the DNA having a nucleotide sequence shown in SEQ ID NO: 2 under stringent conditions, or a DNA having a partial sequence SEQ ID NO: 2 and encoding a protein having immune-stimulating activity.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claims 9, 10, 21-24 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated WO 99/04265 (Old, L. J. et al., published 28 January 1999; cited in IDS) as evidenced by Accession No. AAX40073 (12 July 1999, WO 99/04265-A2, Database N_Geneseq_200701).

Claim 9 is drawn to a DNA encoding the cancer antigen of claim 1, which is a polypeptide that comprises the amino acid sequence of SEQ ID NO: 1 or comprises a sequence that has changes such as additions, subtractions, substitutions, insertions of one or several amino acids and encodes a protein with immune stimulating activity. The specification at page 7, lines 4-8 defines a “protein having immune-stimulating activity” to mean a “protein having activity of inducing an immune response such as generation of an antibody or cell-mediated immunity. Among them, a protein having T cell-stimulating activity of stimulating cytotoxic T lymphocytes (killer T cells/CTL) is particular preferable”. Claim is drawn, in the alternative, to a DNA having the nucleotide sequence shown in SEQ ID NO: 2, a DNA hybridizing with the DNA having the nucleotide sequence shown in SEQ ID NO: 2 under stringent conditions, and encoding a protein having immune-stimulating activity, or a DNA having a partial sequence of either of the previous DNA molecules and encoding a protein having immune-stimulating activity. Claim 21 is drawn to a cancer vaccine, which comprises the DNA of claim 9, or recombinant virus, or recombinant bacteria comprising said DNA. Claim 22 is the cancer vaccine of claim 21 which further comprises an adjuvant. The phrase “cancer vaccine” is interpreted as an intended use for claim 21 respect to the aspect of the claim where the product is simply a DNA of claim 9. Claim 23 is drawn to a probe for diagnosing cancers, which comprises the DNA of claim 9, where the term “probe” does not appears to change the structure of the claimed nucleic acid and is therefore considered a term of intended use, not affecting the scope of the claim. Claim 24 is drawn to an agent for diagnosing cancers, which comprises the cancer diagnostic probe of claim 23 and /or an antibody. Claim 26 is drawn to a probe of claim 23, where claim lists, in the alternative, cancers that may be diagnosed with the probe.

WO 99/04265 teaches nucleotide sequence that encodes the polypeptide having the amino acid sequence of SEQ ID NO: 1 as evidenced by accession no. AAX40073, which shows the alignment between a nucleotide sequence of WO 99/04265, encoding a colon cancer associated gene and the polypeptide sequence of SEQ ID NO: 1. Accession no. AAX40073 teaches that the nucleic acid of WO 99/04265 is 3309 base pairs, which is a nucleic acid molecule described in WO 99/04265 as SEQ ID NO: 582, translated as SEQ ID NO: 583 (see page 62, lines 21-26). WO 99/04265 also teaches that the nucleic acids described therein maybe comprised within pharmaceutical compositions (see page 6, lines 5-11) and that the pharmaceutical compositions may further comprise an adjuvant (see page 6, lines 27-28). Therefore, WO 99/04265 teaches nucleic acids and compositions as claimed.

7. Claims 9, 10, 21, 23, 24 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Scanlan (US 6,403,373; issued Jun. 11, 2002).

Scanlan teaches and claims SEQ ID NO: 18, which is a nucleic acid sequence that encodes a protein that comprises the sequence of SEQ ID NO: 1, and is an antigen that is associated with colon cancer. See below for the alignment of SEQ ID NO: 1 with nucleic acid of Scanlan from US 6517837, which is a divisional of the application that resulted in US 6,403,373:

```

Scanlan teaches the use of the nucleic acids as probes (see column 8, lines 25-46) and also teaches the use of nucleic acids in expression vectors for therapeutic applications (see column 10, lines 8-16). Therefore, Scanlan teaches nucleic acids that are the same as that claimed.

8. Claims 9, 10, 21, 23, 24 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Scanlan-II (Scanlan, M.J. et al., Int. J. Cancer 76: 652-658, 1998; cited in the IDS).

Scanlan-II teaches a nucleic acid, designated NY-CO-25, with GenBank accession no. AF039695) isolated from colon cancer samples and encoding a protein having similarity to hsp-110 (see page 653, Table 1A). Therefore, Scanlan-II teaches a nucleic acid that is the same as that claimed.

9. Claims 9, 10, 21, 23, 24, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakatsura (Biochemical and Biophysical Research Communications, 281: 936-944, 2001; cited in IDS) or Ishihara (Ishihara, K. et al. Biochem. Biophys. Acta, 1444: 138-142, 1999).

Nakatsura teaches a nucleic acid sequence that encodes a human hsp105 and teaches probes for use in detecting expression of hsp105 mRNA (see page 937, 1st paragraph, and also Figure 1). Ishihara teaches a nucleic acid sequence that encodes a human hsp105 protein (see legend to Figure 2 on page 139 and see below, alignment of SEQ ID NO: 1 with encoding nucleic acid sequence):

```

CC -!- FUNCTION: Prevents the aggregation of denatured proteins in cells
CC under severe stress, on which the ATP levels decrease markedly.
CC Inhibits HSPA8/HSC70 ATPase and chaperone activities (By
CC similarity).
CC -!- SUBUNIT: Interacts with HSPA8/HSC70 (By similarity).
CC -!- SUBCELLULAR LOCATION: Cytoplasm.
CC -!- ALTERNATIVE PRODUCTS:
CC Event=Alternative splicing; Named isoforms=2;
CC Name=Alpha;
CC IsoId=Q92598-1; Sequence=Displayed;
CC Name=Beta;
CC IsoId=Q92598-2; Sequence=VSP_002428;
CC -!- TISSUE SPECIFICITY: Highly expressed in testis. Present at lower
CC levels in most brain regions, except cerebellum. Overexpressed in
CC cancer cells.
CC -!- PTM: Phosphorylation on Ser-509 may be important for regulation of
CC the HSPA8/HSC70 chaperone activity (By similarity).
CC -!- SIMILARITY: Belongs to the heat shock protein 70 family.

Therefore, either Nakatsura or Ishihara teaches a nucleic acid that is the same as that claimed.

10. Claims 9, 10, 21, 23, 24 and 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Horne (US 6,974,667; issued 12/13/2005; effective filing date is Jun. 14, 2001), Kaser (US 6,727,006; issued 4/27/2004; effective filing date is Jul. 30, 2001), or Cocks (US. 6,607,879; issued Au. 19, 2003; effective filing date is Feb. 9, 1998).

Horne, Kaser or Cocks teaches a nucleic acid sequence that encodes a polypeptide comprising the amino acid sequence of SEQ ID NO: 1. Horne, Kaser or Cocks also inherently teach nucleic acids that are the complete complements of their disclosed sequences and therefore, teach a nucleic acid sequence that would hybridize to a DNA having the nucleotide sequence shown in SEQ ID NO: 2 under stringent conditions, because their nucleic acids are have almost

100% identity with the sequence of SEQ ID NO: 2. Such a nucleic acid sequence would also be one that has (interpret as comprising) a partial sequence of SEQ ID NO: 2. Because claim 21 is drawn to a cancer vaccine which comprises a DNA of claim 9, the term "cancer vaccine" is interpreted as intended use because it does not appear to structurally affect the scope of a DNA of claim 9. Therefore, Horne, Kaser or Cocks teaches a cancer vaccine of claim 21. Horne, Kaser or Cocks teaches probes for diagnoses (see abstracts). Therefore, Horne, Kaser or Cocks teaches the claimed products. Alignments of SEQ ID NO: 2 with the sequences of Horne, Kaser or Cocks:

```

US-09-023-655-968

; Sequence 968, Application US/09023655

; Patent No. 6607879

; GENERAL INFORMATION:

; APPLICANT: Cocks, Benjamin G.

; APPLICANT: Susan G. Stuart

; APPLICANT: Jeffrey J. Seilhamer

; TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE

; TITLE OF INVENTION: EXPRESSION

; NUMBER OF SEQUENCES: 1508

; CORRESPONDENCE ADDRESS:

; ADDRESSEE: INCYTE PHARMACEUTICALS, INC.

; STREET: 3174 PORTER DRIVE

; CITY: PALO ALTO

; STATE: CALIFORNIA

; COUNTRY: USA

; ZIP: 94304

; COMPUTER READABLE FORM:

; MEDIUM TYPE: Floppy disk

; COMPUTER: IBM PC compatible

; OPERATING SYSTEM: PC-DOS/MS-DOS

; SOFTWARE: Word Perfect 6.1 for Windows/MS-DOS 6.2

; CURRENT APPLICATION DATA:

; APPLICATION NUMBER: US/09/023,655

; FILING DATE: HEREWITH

; CLASSIFICATION:

; PRIOR APPLICATION DATA:

; APPLICATION NUMBER:

; FILING DATE:

; CLASSIFICATION:

Application/Control Number:
10/525,831
Art Unit: 1643

Page 26

Conclusion

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anne Holleran, whose telephone number is (571) 272-0833. The examiner can normally be reached on Monday through Friday from 9:30 am to 5:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Larry Helms, can be reached on (571) 272-0832. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (571) 272-1600.

Papers related to this application may be submitted to Group 1600 by facsimile transmission. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Official Fax number for Group 1600 is (571) 273-8300.

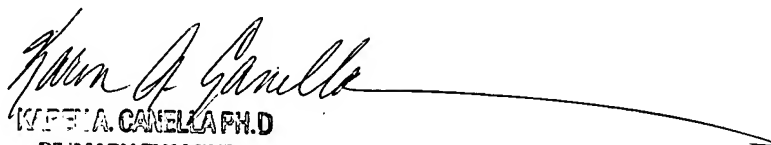

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

Application/Control Number:
10/525,831
Art Unit: 1643
